

ABSTRACT

HOME MAINTENANCE SERVICES

In olden days there is no such resources for getting services for home. At that time we had to ask people to get contact number or their working place address then we had to either go to their working place or had to contact them. Then they will come to our home and provide services. This all things take a long time and also not easy.

But this time is for internet technology. Every people use very much technology. So we develop this portal to provide easily most of the home maintenance services.

So, using this home maintenance service website user can get reliable 24x7 services at their place. Services provided by our system like Pest-control, Appliance repairing, Home cleaning , Medical , Computer repairing , Painting , Carpentry, Plumbing , Mechanical , Electrical, Packers & Movers and also the person who will go to the home to provide service is trustworthy and expert in their particular field and also charges for the particular services are prescribed and reasonable.

In this, customer can register by their e-mail, contact number. They can requested for specific service by clicking on that service and fill necessary information like residential address, contact-number, area pin-code, e-mail id . Here when customer registered for service they will get a specific time. Service provided as per the schedule by expert person who will going to provide that service.

In Proposed System, as per the season discount voucher and cash back coupons. If the customer needs to use these coupons they have to provide particular promo code. Customer has to payment by credit card or debit card. Due to any reason if any user need to cancel the service then only 50% cash back is given to them from any type of service. In this, Particular person also join our website for work. They can also registered their name by providing digital copy of the following documents: Passport photo, police verification certificate, one residential proof.

Payment to the particular service provider is given as per their service and rules of company.

The project is developed in PHP (Hyper Text Preprocessor) language.
